

## Transforming Diabetes Care

### Continuing Education Units (CEUs) Diabetes Training at **NO CHARGE**

#### Monitoring: From Measuring to Mastering Management

This is a self-paced, online continuing education program that focuses on glucose monitoring. The program consists of three levels, and you can choose the courses that are most relevant to your needs or register for all three.

#### Level 1 (Recommended for Entry Level Clinicians)

Participants will be able to identify the value of SMBG, match the right blood glucose monitor based on key features, determine effective SMBG education strategies, and know glycemic goals and general monitoring recommendations of major professional organizations.

#### Level 2 (Recommended for Clinicians and Diabetes Educators early in their careers)

Participants will be able to identify strategies for effective SMBG, list top SMBG learning needs identified by individuals with type 2 diabetes, and develop specific, purposeful monitoring schedules based on therapy type, level of glycemic control, and individual needs and interests.

#### Level 3 (Recommended for Experienced Clinicians and Diabetes Educators)

Participants will be able to apply principles of pattern management to help individuals become effective problem solvers to prevent glucose excursions, weave glucose monitoring into diabetes self-management training, and describe the emerging role of mobile technology in data collection and interpretation.

#### Pricing

AADE Member Pricing: No charge (for no-charge enrollment, use registration code: SELFMON16)

#### Registration

Participants need to create accounts for the Johnson & Johnson Diabetes Institute ([www.jjdi.com](http://www.jjdi.com)) and the American Association of Diabetes Educators (AADE) ([www.diabeteseducator.org](http://www.diabeteseducator.org)). Participants can then register for the program by visiting [www.jjdi.com](http://www.jjdi.com) and clicking "Education Credits" at the top of the page.

The program is available through June 10, 2018.

This program was developed by AADE and sponsored by an educational grant from the Johnson & Johnson Diabetes Institute, LLC.
